Wordcount.java

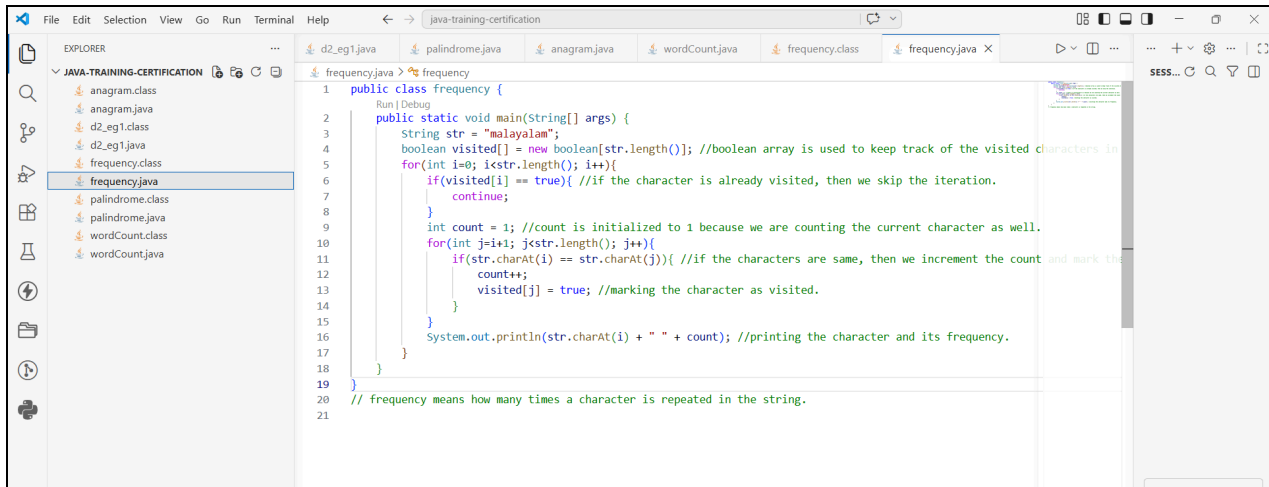

```
1 public class wordCount {  
2     public static void main(String[] args) {  
3         String str = "Java is a programming language";  
4         str = str.trim(); //trim() is used to remove the leading and trailing spaces from  
5         String [] str2 = str.split(regex: " "); //split() is used to split the string  
6  
7         System.out.println("Number of words in the string: " + str2.length);  
8     }  
9 }  
10  
11  
12  
13  
14  
15  
16  
17  
18  
19  
20  
21
```

Output:

```
PS C:\java-training-certification> javac wordCount.java  
PS C:\java-training-certification> java wordCount.java  
Number of words in the string: 5
```

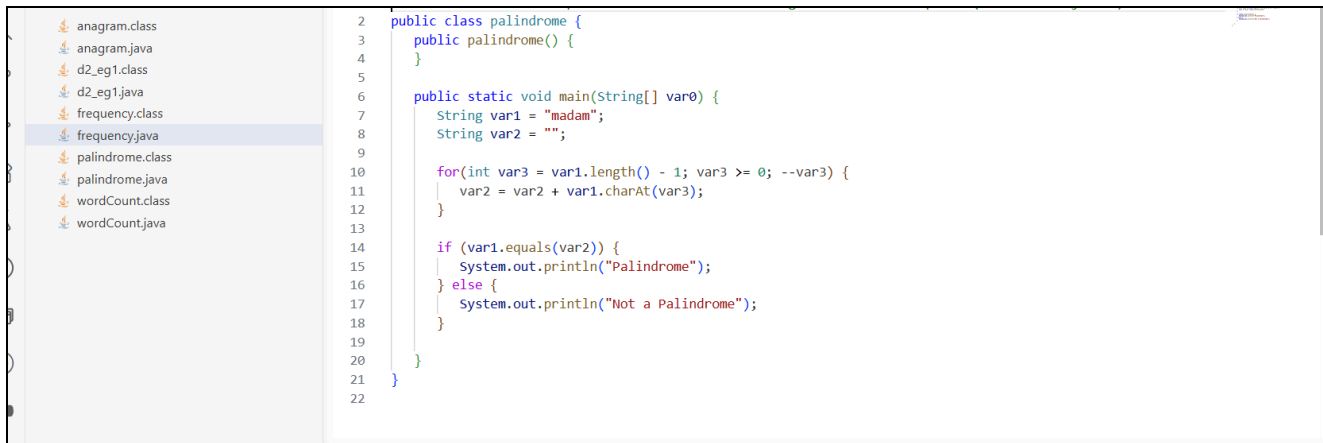

Frequency.java

Output:

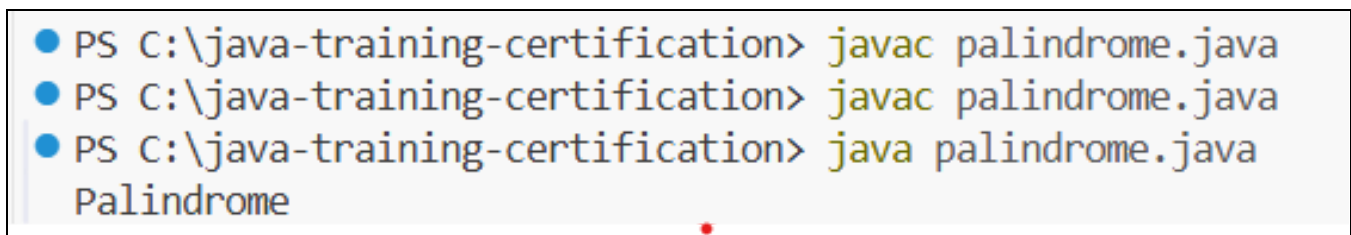

Palindrome.java

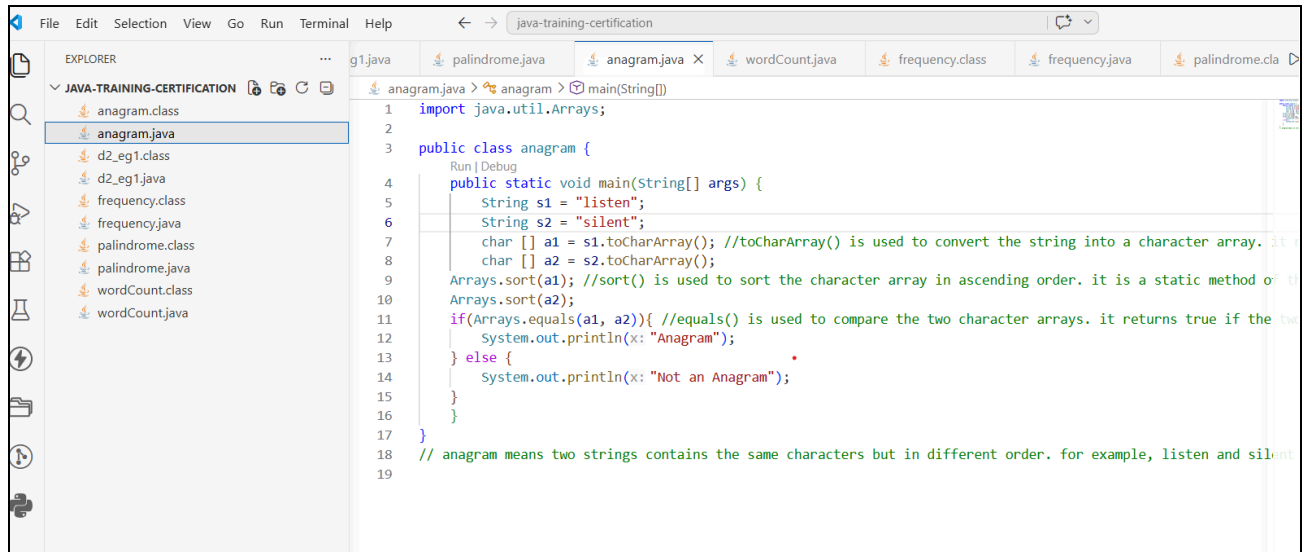

```
2 public class palindrome {
3     public palindrome() {
4     }
5
6     public static void main(String[] var0) {
7         String var1 = "madam";
8         String var2 = "";
9
10        for(int var3 = var1.length() - 1; var3 >= 0; --var3) {
11            var2 = var2 + var1.charAt(var3);
12        }
13
14        if (var1.equals(var2)) {
15            System.out.println("Palindrome");
16        } else {
17            System.out.println("Not a Palindrome");
18        }
19    }
20 }
21
22
```

Output:

```
● PS C:\java-training-certification> javac palindrome.java
● PS C:\java-training-certification> javac palindrome.java
● PS C:\java-training-certification> java palindrome.java
Palindrome
```

Anagram.java

```
1 import java.util.Arrays;
2
3 public class anagram {
4     public static void main(String[] args) {
5         String s1 = "listen";
6         String s2 = "silent";
7         char [] a1 = s1.toCharArray(); //toCharArray() is used to convert the string into a character array. it
8         char [] a2 = s2.toCharArray();
9         Arrays.sort(a1); //sort() is used to sort the character array in ascending order. it is a static method of t
10        Arrays.sort(a2);
11        if(Arrays.equals(a1, a2)){ //equals() is used to compare the two character arrays. it returns true if the tw
12            System.out.println(x: "Anagram");
13        } else {
14            System.out.println(x: "Not an Anagram");
15        }
16    }
17 }
18 // anagram means two strings contains the same characters but in different order. for example, listen and silent
19
```

Output:

```
PS C:\java-training-certification> javac anagram.java
PS C:\java-training-certification> java anagram.java
Anagram
```
