

TASK 5

1. Palindrome Check

Write a program to check whether the entered string is a **palindrome** (same forwards and backwards).

Ignore case using `.equalsIgnoreCase()`.

2. Word Count

Count the number of words in it (split by spaces using `.split(" ")`).

3. Frequency of Characters

Count the frequency of each character in the string.

4. Anagram Check

Check whether they are anagrams (i.e., contain the same characters in different order)

5. Reverse the string

6. Longest Palindromic Substring

Write a Java program to find the longest Palindromic Substring within a string.

7. Remove Duplicate Characters

Write a Java program to print the result of removing duplicates from a given string.

8. Get Byte Array from String

Write a Java program to get the contents of a given string as a byte array.

9. Divide String into Equal Parts

Write a Java program to divide a string into n equal parts.

10. Reverse Every Word

Write a Java program to reverse every word in a string using methods.
